I. Psychoactive Drugs (preliminary data)

- Drug use purposes

II. Psychedelics (practical study)

- Influence on life quality and spirituality

III. Psychedelics (theoretical study)

- Drug instrumentalization & categorization

IV. Bio-psycho-socio-spiritual framework

- Theories, models, and human needs

I. Psychoactive Drugs

Psychoactive Drug Use

- complex phenomenon: many drugs & use patterns
- social discourses mostly disregard voices of users
- attention targeted at problematic drug use
- large percentage of drug users are non-problematic
- non-problematic drug use is understudied
- Let's study drug use purposes!

Study Overview

- online questionnaire
- recruited with snowball method from multiple sources
- purposive sampling in target group:
Hungarian Psychedelic Community (www.daath.hu)
- 667 adequately completed web forms
- exclusion criteria: problematic drug use
- 589 non-problematic users
- 3 psychological instruments:
coping (PICI), purpose in life (PIL), spirituality (ISS)

Drug Types with Categorization

Depressants	Alcohol		
	Inhalants		
	Sleep medication, tranquilizers, anxiolytics (without a diagnosis or prescription)		
	Medical drugs and alcohol combined		
	Heroin and other opiates		
	GHB, GBL		
Stimulants	Tobacco		
	Ecstasy (MDMA)		
	Amphetamine and other stimulants		
	Cocaine		
Hallucinogens	Deliriants	Jimson weed, angel's trumpet, henbane etc.	
		Dissociatives	Ketamine
	Nitrous oxide (N ₂ O)		
	PCP		
	Psychedelics	Minor	Marijuana, hashish
			New synthetic drugs (2C-B, 5-MeO-DMT etc.)
			Ibogaine
		Major	LSD
			Psilocybe mushrooms
			Mescaline cacti
Salvia divinorum			
DMT (ayahuasca, yopo etc.)			
LSA (morning glory, HBWR etc.)			
(fictional drug)	Relevin		

Drug Use Purposes

RELSPI	Religious or spiritual practices
S-KNOW	Self-knowledge and self-inspection
S-MEDI	Self-medication
MOOD	Enhancing mood
BORED	Avoiding boredom and hopelessness
DEFIC	Offsetting a deficiency
SOCIAL	Increasing social contact
SENS	Increasing sensation and pleasure
ART	Stimulating artistic creativity/performance
PHYS	Enhancing physical power
REBEL	Rebellion or alternative lifestyle
IDENT	Building personal identity and drawing attention
MEMBER	Expressing membership in a group
CURIO	Out of curiosity

Drug Influence on Life Quality

II. Psychedelics (practical)

Study Goals

- To study psychopharmacological self-enhancement by assessing a non-problematic drug user group
- Comparing:
 - 1) autognostic use of psychedelic drugs („PSY”)
 - 2) other uses of other drugs („C1”)
 - 3) no drug use („C2”)
- Initial work hypothesis:

Differences in life meaningfulness and coping characteristics

Autognostic psychedelic drug use associated with

 - enhancements of life quality
 - a higher level of spirituality

Major Psychedelics

LSD

psilocybin

mescaline

DMT

LSA

salvinorin-A

Major Psychedelics

LSD

psilocybin

mescaline

DMT

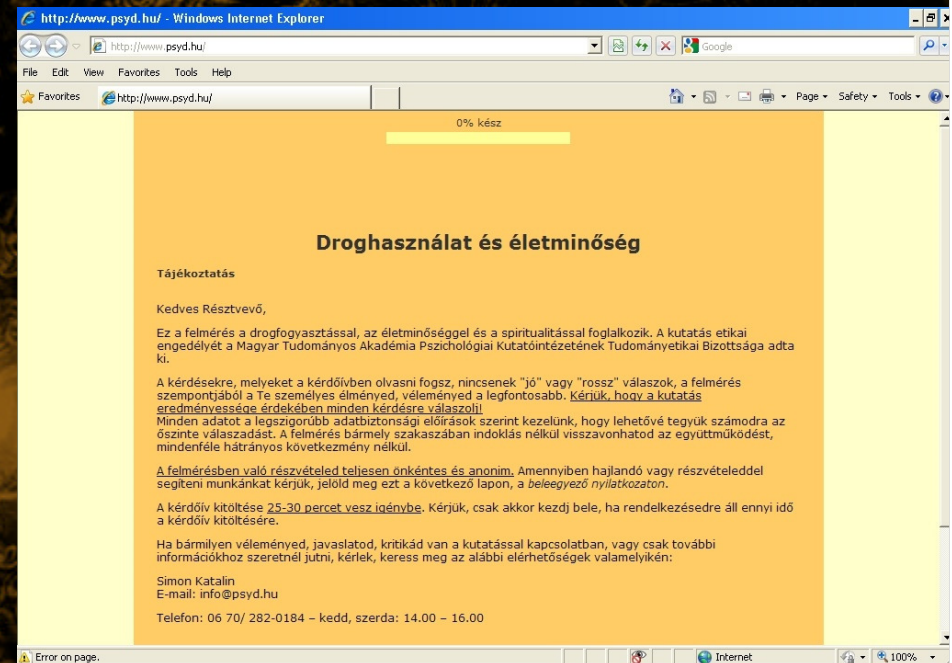

LSA

salvinorin-A

Methods

- online questionnaire
- informed consent
- socio-demographics
- questions about drug use

3 psychological instruments:

www.psyd.hu

- coping (PICI)
- meaningfulness of life (PIL)
- spirituality (ISS)

Psychological Immune Competence Inventory (PICI)

- assesses personality factors behind an individual's resource capacities for long-term coping with stress
- 80 items, developed by Oláh (2005)

Purpose in Life Test (PIL)

- measures a protective factor that meaningfulness of life has on mental health (based on the concepts of Frankl)
- 20 items, developed by Crumbaugh and Maholick (1964)

Intrinsic Spirituality Scale (ISS)

- measures the guiding capabilities of spirituality in a person's life (based on the Religious Orientation Scale)
- 6 items, developed by Hodge (2003)

PSYNDEX score (“psychedelic index”)

- calculated for 277 non-problematic drug users
- drug use parameters:
 - (1) number of psychedelic drugs
 - (2) autognostic drug use purposes
 - (3) importance and effects of the experience
- obtained distribution range (-12 to 23)
- separated into roughly equally sized groups:
 - high-scoring (PSYNDEX > 1) -> target group (“PSY”)
 - low-scoring (PSYNDEX < -2) -> control group (“C1”)

Results

- PSY group substance use less problematic than C1
- PSYINDEX – PICI: weak correlation ($r = .137$, $p < .009$) only if problematic drug users included
- PSYINDEX – ISS: correlation ($r = .339$, $p < .001$)
- ISS in matched groups: PSY > C1, C2
- # of psychedelic drugs: positive correlation with ISS

Discussion 1/2

- Great variability and marked differences in the usage patterns of psychoactive drugs that cannot be approached by oversimplified or problem-oriented generalizations
- Exclusion of problem users: evens out subtle differences
-> Focusing on problem users: likewise biases results
- Religious/spiritual attitude may keep away from drug use, especially if abstinence is valued/required by the community
- ...But: sacramental drug use may also be in accordance with religious or spiritual goals
- **Spirituality may act as a protective factor against drug-related problems for both drug users and non-users**

Discussion 2/2

- Meaning of *spirituality* is ambiguous
- Autognostic drug use as a “training situation”:
 - deliberately provoked exceptional experiences
 - in order to gain self-knowledge
 - to rehearse coping strategies
- Actual efficiency and benefits still speculative

Next study: qualitative interviews with target group

Summary

Drug use and its purposes were studied in 667 drug users and non-users with an online questionnaire

Focus on autognostic use of psychedelic drugs

Participants matched and grouped into PSY, C1, C2

Coping, life quality and spirituality were assessed with psychological instruments PICI, PIL and ISS

No differences found in coping and life quality between non-problematic drug users and non-users

Psychedelic drugs less associated with problems

Autognostic psychedelic users had higher spirituality

Voice of the Psychonauts: Coping, Life Purpose, and Spirituality in Psychedelic Drug Users

Levente Móro, M.Sc.^a; Katalin Simon, M.Sc.^b; Imre Bárd, M.Sc.^c & József Rác, Ph.D.^d

Abstract— Psychoactive drug use shows great diversity, but due to a disproportionate focus on problematic drug use, predominant nonproblematic drug use remains an understudied phenomenon. Historic and anecdotal evidence shows that natural sources of “psychedelic” drugs (e.g., mescaline and psilocybin) have been used in religious and spiritual settings for centuries, as well as for psychological self-enhancement purposes. Our study assessed a total of 667 psychedelic drug users, other drug users, and drug nonusers by online questionnaires. Coping, life purpose, and spirituality were measured with the Psychological Immune Competence Inventory, the Purpose in Life test, and the Intrinsic Spirituality Scale, respectively. Results indicate that the use of psychedelic drugs with a

(1) – Target Article:

Müller & Schumann (2011)

**Drugs as instruments – A new framework for
nonaddictive psychoactive drug use**

Behavioral and Brain Sciences, 34(6), 293–310.

Abstract: Most people who are regular consumers of psychoactive drugs are not drug addicts, nor will they ever become addicts. In neurobiological theories, non-addictive drug consumption is acknowledged only as a “necessary” prerequisite for addiction, but not as a stable and widespread behavior in its own right. This target article proposes a new neurobiological framework theory for non-addictive psychoactive drug consumption, introducing the concept of “drug instrumentalization”. [...]

Proximate mechanisms of psychoactive drug use

(by Müller & Schumann)

1. Improved social interaction.
2. Facilitated sexual behavior.
3. Improved cognitive performance and counteracting fatigue.
4. Facilitated recovery from and coping with psychological stress.
5. Self-medication for mental problems.
6. Sensory curiosity – Expanded perception horizon.
7. Euphoria, hedonia, and high.
8. Improved physical appearance and attractiveness.

6. Sensory curiosity – Expanded perception horizon.

(by Müller & Schumann)

„[...] Drugs that humans consume primarily for their sensory perception changing properties, such as hallucinogens”

- mescaline, psilocybin, LSD**
- phencyclidine, ketamine, GHB**
- cannabis**

„[...] coincident activation of previously unrelated representations that are then interlinked”

(2) – Open Peer Commentary:

Móro & Noreika (2011)

**Sacramental and spiritual use
of hallucinogenic drugs**

Behavioral and Brain Sciences, 34(6), 319–320.

Abstract: Arguably, the religious use of hallucinogenic drugs stems from a human search of metaphysical insight, rather than from a direct need for cognitive, emotional, social, physical, or sexual improvement. Therefore, the sacramental and spiritual intake of hallucinogenic drugs goes so much beyond other biopsychosocial functions that it deserves its own category in the drug instrumentalization list.

Sacramental and spiritual use of hallucinogenic drugs

(by Móró & Noreika)

Induces unique kinds of subjective experiences with a rich phenomenology

Results in increased apperception, dissolution of ego boundaries, feelings of unity and insight, presence of or encounters with nonhuman entities or beings

Appears as independent from one's own mind

Motivated by gaining metaphysical insight

Originates from a "higher" need for mystical experiences

Supported by vast amount of archeological evidence and historical documentation

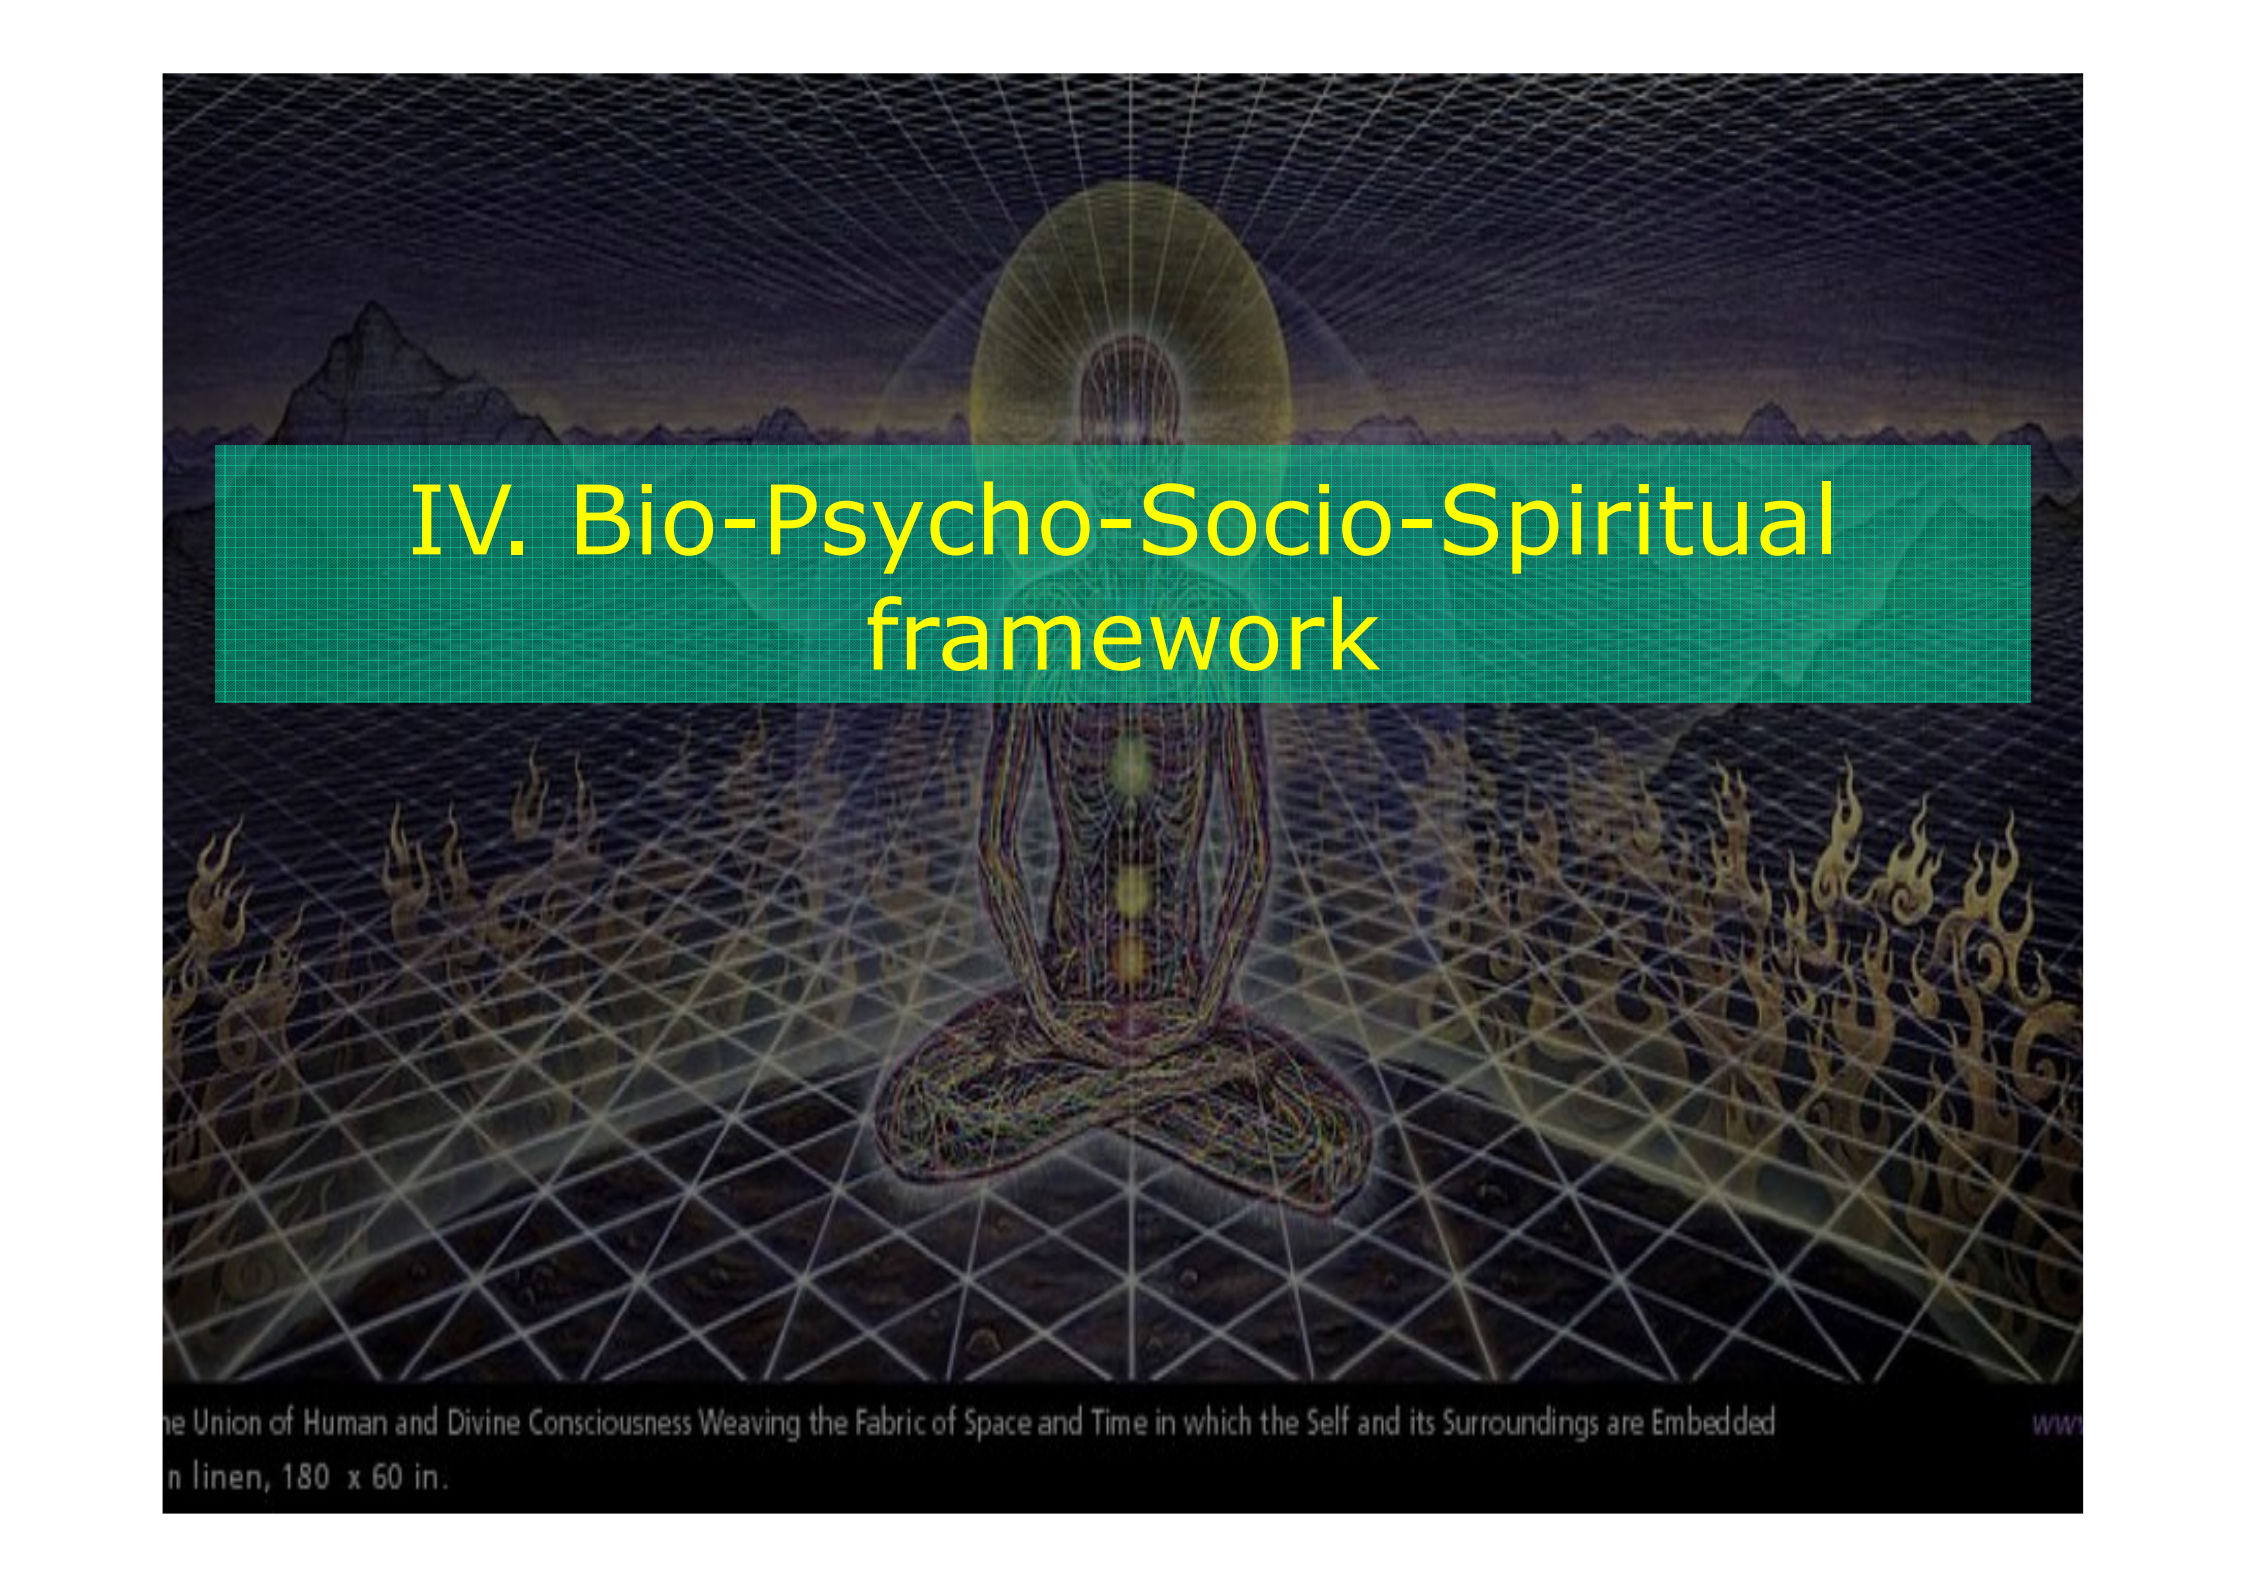

(3) – Authors' Response:

Müller & Schumann (2011)

To use or not to use: Expanding the view on non-addictive psychoactive drug consumption and its implications

Behavioral and Brain Sciences, 34(6), 328–347.

„Móro & Noreika argued that in particular sacramental and spiritual drug intake, which is famously associated with psychedelic drugs, may go far beyond a simple expansion of the perception horizon. We fully agree with this suggestion and add this as ninth instrumentalization goal to the list as:
Facilitating spiritual and religious activities.”

Summary

Psychedelics:

- used for autognostic purposes
- has positive effect on life quality
- associated with a higher level of spirituality
- facilitate spiritual and religious activities
- do higher functions in a multi-level framework

...are the most extraordinary!

JPS

NEW OPEN ACCESS JOURNAL JOURNAL OF PSYCHEDELIC STUDIES

CALL FOR PAPER

We are delighted to announce the launch of our new journal, Journal of Psychedelic Studies, dedicated exclusively to the topic of psychedelics. Editorial Board members have been chosen for their expertise in key areas related to the journal.

The journal seeks to provide an interdisciplinary forum for the exchange of information about psychedelic substances and the biological, neurochemical and psychological changes they facilitate, as well as their social implications.

The broad scope of the journal includes different approaches to the pharmacological modification of consciousness, as well as research reports on psychedelic experiences; it also examines the therapeutic potential of these substances, as well as their cultural implications. The journal accepts case reports, case series, original research, meta-analyses, reviews of the literature, and book reviews of topics ranging from psychopharmacology, neurobiology and psychology to philosophy, sociology and anthropology. The journal's philosophy is grounded in biology and psychology, but it is also open to considerations of spirituality and religion.
